Education

National Institute of Technology, Delhi

Aug. 2025 – May. 2027

M.Tech in Mathematics and Computing

Vellore Institute of Technology, Vellore

Sep. 2020 – May. 2024

B.Tech in CSE with IoT

Relevant Coursework

- DSA
- Artificial Intelligence
- Database Management
- Computer Networks
- Machine Learning
- Operating Systems
- Cloud Computing
- Cyber Security

Experience

Artificial Intelligence Internship

May 2023 – July 2023

Smart Bridge

- Movie Recommendation Based on Emotion Using Web Scraping with IBM.
- Collected and processed large volumes of movie data from multiple online sources using Python-based web scraping techniques to support sentiment and emotion analysis.
- Developed an emotion-driven movie recommendation model integrating NLP and sentiment analysis, enabling personalized movie suggestions aligned with the user's emotional state.
- Designed an interactive Flask web interface to deliver real-time recommendations, improving user engagement and enhancing the overall recommendation experience.

Projects

Real-time Rendering for Cricket Shot Detection using Deep Learning |

May 2024

- Developed an automated system that can accurately detect and classify umpire gestures and cricket batting shots using deep learning techniques, specifically convolutional neural networks (CNNs) and long short-term memory (LSTM) networks, integrated with the MediaPipe framework for real time pose estimation.
- Achieved high accuracy rates of 84.34 Percent for classifying batting shots and 81.7 Percent for recognizing umpire gestures, demonstrating the potential for practical applications in cricket analysis, broadcasting, and coaching.

Lane Prediction Optimization and Secure Traffic management using VANET |

December 2022

- Designed and implemented a vehicle-to-vehicle (V2V) and vehicle-to-infrastructure (V2I) communication framework using Vehicular Ad Hoc Networks (VANET) to enhance road safety and traffic efficiency.
- Developed an intelligent lane prediction and route optimization model using the Dijkstra algorithm, enabling vehicles to identify and follow the shortest and safest paths in real time.
- Utilized On-Board Units (OBUs) and Road Side Units (RSUs) to enable seamless data exchange between vehicles and infrastructure, supporting dynamic traffic updates and congestion control.

Journal Paper

Ashok Reddy Kurapati, V Sree Chaitran, Kakumanu LV Surya Anil, Vaibhav Uddavolu, and Dr. B. Kalaavathi, *Lane Prediction Optimization and Secure Traffic Management Using VANET*, Harvest: An International Multidisciplinary and Multilingual Research Journal, Volume III, Issue III, July-September 2023.

Technical Skills

Languages: Python, C, Java, MATLAB, JavaScript, PHP, SQL, HTML, CSS

Developer Tools: VS Code, Eclipse, Google Cloud Platform, Android Studio

Frameworks & Libraries: React, PyQt (familiar), Matplotlib, AJAX

Mathematics: Linear algebra, probability, statistics, calculus

Achievements

- * Achieved a rank of 6160 out of a competitive pool of 1,43,265 candidates in the TS EAMCET.
- * Core Committee Member – Nature Lovers Club, coordinated campus-level eco activities and awareness drives.
